

# Local Ownership — Local Pride

**HYDRO-VAC • STEAM • USED OIL.**

**RADIUM STARTED OPERATIONS** during the winter of 2004. It all began with a new idea on how to service the local industry. After spending over 10 years in the oil and gas operations sector, we recognized the lack of certain services throughout the industry. There were multiple services being utilized in oil and gas such as pressure trucks, steamers, and vacuum truck services, but none that could provide them all together into one truck.

This is where the idea for a new unit that could provide all of the services into one for a combined price came from. With a lot of research and hard work we teamed together with Troyer Ventures Ltd. from Fort St. John, BC, and came up with the idea for the multi truck. Customers could now receive Pressure, Steam, Picker, Used Oil Collection, Delivery and Disposal all in one unit. This new innovation is the cornerstone of Radium's business plan. Right from the start we had the goal of giving our clients something better than the rest, when it came all aspects of a service company. Since then we have diversified into other specialty units such as combination vac trucks, hydro-vacs, steamers, and pressure trucks.

The commitment to finding a better way is evident in our steam/pressure wash units with twin wash pumps and circulation equipment to our pressure/steam/picker unit. We want to provide our customer with the best, most capable equipment with an elevated level of service.

We still believe that the key to providing exceptional service to our customers is Service, Safety and Reliability. Radium holds high standards when it comes to these issues and makes every effort to uphold them.

Radium is locally owned and operated and has over 30 years of combined oilfield experience. All of the staff at Radium will go the extra mile for its customers when

it comes to getting the job done right. We realize that a company is built on teamwork and make that a part of our overall hiring process. Everyone contributes something to the team and everyone is rewarded for their work.

When you use Radium for your services you know that it goes back into the local community. We are proud to be a part of the Peace Region and will be holding events this summer that will give back value to the community and local charities. Radium is an upstanding member of the local Chamber of Commerce, and Oilmen's Association, and is always looking for new groups to join into. We are a family oriented business and everyone that works here understands the value of hard work, family and friends.

Looking forward to the future, Radium would like to continue to secure its place in the Energy Sector as an innovative company that brings value to it's customers. You can count on us to maintain a "think outside the box" mentality that not only helps get things done, but makes things better. We are committed to providing the best Service, Safety, and Reliability for our customers today and into the future.
